## DETAILED ACTION

### *Priority*

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Ohouchi et al (4,959,805).

Regarding Claims 1,6,11, Ohouchi et al teaches a coordinate input device for generating a coordinate value corresponding to light coming from a pointing tool (summary; fig.1; col.2, lines 31-51; col.7, line 10-51), comprising: a plurality of sensing means (col.25, lines 46- 59), arranged for one coordinate axis, for sensing the light wherein light-receiving areas of the plurality of sensing means have an overlapping portion (summary; col.2, lines 31-52; figs.1-2,7; col.7, line 53- col.9, line 65); measurement means for measuring peak levels of data sensed by the plurality of sensing means arranged for the one coordinate axis (figs.1-2; col.4, lines 8-48; col.7,line 12- col.8, line 52; col.25, line 63- col. 26, line 13); comparison means for

comparing the peak levels measured by the measurement means (figs.1-5; col.7, line 13- col. 10, line 25); selection means for selecting one of the plurality of sensing means arranged for the one coordinate axis on the basis of a comparison result of the comparison means; and output means for outputting a coordinate value corresponding to the light on the basis of the sensing means selected by the selection means (abstract; summary; Figs.1-8; col.7, line 10- col.10, line 28; col.17, line 6-col.21,line 53; col.25, line 46- col.38, line 15).

Regarding Claims 2,7, Ohouchi et al teaches that each of the plurality of sensing means has a linear array of a plurality of photoelectric conversion elements (fig.1-8; col. 25, line 46- col.29, line 65).

Regarding Claims 3-4,8-9, Ohouchi et al teaches that output means comprises computation means for computing the coordinate value corresponding to the light at resolving power not less than the number of pixels corresponding to the plurality of photoelectric conversion elements; and the output means comprises storage means for storing a reference coordinate value in the overlapping portion, and the output means outputs the coordinate value corresponding to the light using the reference coordinate value ( Figs.1-8; col.7, line 10- col.10, line 28; col.17, line 6-col.21,line 53).

Regarding Claims 5,10, Ohouchi et al teaches the overlapping portion is defined by light-receiving areas of neighboring ones of the plurality of sensing means (summary; col.2, lines 31-52; figs.1-2,7; col.7, line 53- col.9, line 65).

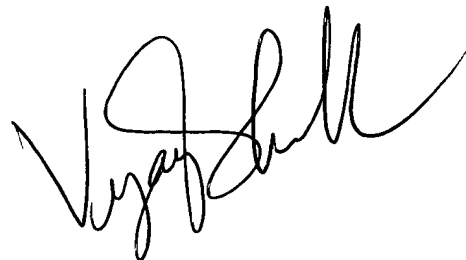

4. Applicant's arguments with respect to claims 1-11 have been considered but are moot in view of the new ground(s) of rejection.
